

# HOW ISOLITE CAN HELP YOUR LASER PROCEDURES

## BENEFITS TO YOUR PRACTICE

### **INCREASE PRODUCTIVITY. INCREASE PROFITABILITY.**

Isolite enables the doctor to work on multiple teeth at the same time decreasing procedure time, enabling the practice to book incremental patients in the course of the day.

### **EFFICIENT STAFF COSTS. STAY AHEAD OF SCHEDULE.**

Your dental assistant is not required to stay chairside enabling them to perform other tasks to get ahead of procedures.

### **REDUCE LOSS OF REVENUE FROM RE-DO'S. HIGHER COLLECTION RATES.**

Isolite eliminates fluids, humidity, and debris from the work area that can lead to restorative failures. Improve the efficacy of cementation and bonding, providing consistent clinical outcomes and a positive patient experience with Isolite.

### **FEWER NO-SHOWS. IMPROVE YOUR PRACTICE'S REPUTATION.**

Patients are more comfortable and feel safer with Isolite, improving their experience in your practice. Chair time is reduced, increasing the probability of your patients coming back for their next appointment.

# BENEFITS TO CLINICIANS

## REMOVAL OF CARIES

The soft, flexible Mouthpiece means less stress for the patient during this procedure and allows the clinician to have a clean visual working field. With the patient's tongue out of the way and no saliva interruption, the clinician can work precisely and get the patient out of chair in less time.

## TROUGHING

Using Isolite when troughing, you can clearly define gingival margins circumferentially on both the mesial and distal.

## SOFT TISSUE IS PROTECTED

When the clinician doesn't have to worry about the tongue or other soft tissues being at risk of damage from the laser, they can focus better, resulting in a higher degree of patient comfort. With each quadrant isolated, interproximal periodontal treatment is easier to access.

## APICOECTOMY

The Mouthpiece is easy to move into the buccal cheek providing access difficult teeth while protecting the cheek and keeping the tongue back.

## PLUME EVACUATOR

Isolite eliminates smells and vapor from laser plume while continuously evacuating. The comfortable Mouthpiece takes vapor away from the patient's nose during soft tissue procedures.

## THROAT OBTURATED

No inadvertent swallowing or small particles falling into patient's airway.

## H2O EVACUATED

HVE takes place through the Mouthpiece, removing all fluid and debris and giving a better visual working field. Cooling and use of water during laser applications is controlled.
